 **SCAN COIN**

When should your CDS machines be serviced? What's the ideal coin collection interval?

SCAN COIN Connect CDS – a new tool for keeping track of CDS units' status – gives you the answers.

SCAN COIN Connect CDS: keep track, stay efficient

Identifying the right servicing and collection frequency is a decisive factor in the cost-effective operation of CDS. With Connect CDS, from one location you have an overview of all your CDS installations, enabling you to schedule servicing and collection for maximum efficiency.

Status-seeking software

The Connect CDS software receives, interprets and displays signals sent by the connected CDS units.

A CDS can be connected to the network on-line via a wireless network.

Signals from the CDS units register events, such as deposits, a switch to supervisor mode, or when coin or note intake has reached a certain preset level.

It is also possible to actively track the situation at specific units. You can at any time, or at scheduled intervals, check the status of one, several, or all CDS units via the software.

Cash your receipts

When the CDS is placed in a retail environment, it is common that the users can trade the value of their receipt for merchandise or cash in higher denominations. In order to help the retailer verify the authenticity of the CDS receipts, Connect CDS is delivered with a receipt verification tool.

Even though the receipt can be printed on security paper to make fraud more difficult, it is not fool proof. So in order to verify that the receipt has not yet been cashed at another store or branch, the Connect CDS Receipt verification module comes in handy. When the barcode on the receipt is scanned, a control towards the database will tell if the receipt has been checked or not, together with information about where the receipt was issued and its value. Consequently, when a receipt is cashed, this is saved in the database to prevent it from being cashed in other stores or branches.

Flexible monitoring

- Add CDS units to your monitored network.
- Edit information about added CDS units.
- Schedule automatic status checks.
- View the status of connected CDS units.
- Carry out "ad hoc" status checks, on a single unit or all units.
- Show statistics on screen for a selected CDS and selected period.
- Generate column charts for uptime, fees collected and number of deposits.
- Print paper reports.

Key benefits

Superior overview – Your company can monitor the activities of all your CDS units from one location.

Better planning – The software alerts you when the coin level in the boxes is high or the level of receipt paper is low, making it easier to plan optimum servicing and coin box collection.

Maximised availability – Error notices displayed by the software will help reduce the machine's downtime as the necessary servicing can be rapidly provided.

COMPUTER SPECIFICATIONS

COMPUTER	Personal computer with an Intel Pentium 233-MHz or faster Processor (Pentium III recommended)
MEMORY	512 MB of RAM or greater
HARD DISK	130 MB of available hard-disk space
DRIVE	CD-ROM or DVD drive
DISPLAY	Super VGA (800X600)
OPERATING SYSTEM	Microsoft Windows 2000 with service pack 4 (SP4), Microsoft Windows XP, or later
OPTIONS	
LAN	Communication using TCP/IP
WAN	Communication using GPRS/GSM

By monitoring all your CDSs you can minimise the machines' downtime.

Monitoring can be done either via your regular network or via GPRS.

Ideal both for banking and retail environments.

Connect CDS is a tool that helps you plan service and collection frequency.

Founded in 1966, SCAN COIN is one of today's leading suppliers of cash processing equipment, system solutions and services. Our worldwide customer base is served through a network of SCAN COIN companies and distribution partners covering some 120 countries. SCAN COIN develops, manufactures and markets equipment and integrated solutions for handling banknotes and coins, and has become a world leader in the automatic cash processing market.
